

tl;dr

We need a product manager capable of creating and executing our strategic roadmap to deliver the best user experiences in Web3 and decentralized file storage.

who we are

The ArDrive Community is obsessed with the concept of **permanent** storage.

ArDrive is a new kind of file storage platform that pairs the Arweave blockchain's "pay once, store forever" model of decentralized storage with familiar cloud storage application user experiences. Its intuitive interfaces let everyone from dApp developers to everyday consumers upload, download, cryptographically secure, and share their files across platforms and devices.

We, the ArDrive Core Drivers, are a small, global team operating in a lean agile way. Our purpose is to support, inspire, and learn from one another while building the best possible platform solutions for permanent file storage. We provide a flexible, collaborative, and remote-first work environment with a focus on providing a great work-life balance for all our team members.

what we offer

There's a growing list of perks and benefits for being a Core Team member including:

- An exciting and diverse start-up environment, with experienced leaders and mentors
- An opportunity where your voice, projects and decisions will directly impact the future of our products
- The chance to grow and learn about the latest decentralized storage, cryptocurrency, and blockchain technologies in a professional setting
- Competitive salary, stock options and merit-based bonuses
- Membership into the ArDrive Community DAO
- Flexible work schedule and an unlimited paid time off policy
- Employee medical benefits (USA only)

position and role

As the ArDrive Product Manager, you will work across our design and engineering teams to drive and track the creation of engaging user experiences in our web, desktop, and mobile applications. You will be responsible to:

- Develop product strategy based on community, business and technical requirements, user needs and feedback, and technology landscape to deliver value
- Conduct market analysis across our immediate ecosystem and the broader blockchain space and leverage product analytics and user research to inform decisions and measure success
- Collaborate with Product Design to assess the feasibility and soundness of designs and implement elegant user experiences with responsive interfaces
- Construct, organize, and facilitate the prioritization of the backlog of features, defects, and technical debt work items that represent the ArDrive Community's priorities
- Drive strong communication and alignment up, down, and sideways within our team and community.
- Work with our Marketing Team to plan and execute release plans and go-to-market strategies.
- Take part in Agile ceremonies such as standups and retrospectives.
- Performing all functions above in a manner that is inclusive and respects the dignity and wellbeing of the Core Drivers and the broader ArDrive community.

requirements

Proven track record working in a team environment as a product manager with the following requirements.

- At least 3 years of experience in the technology industry as a product manager
- Strong competency in product management methodologies
- Leading cross-functional team projects with competing priorities and stakeholders
- Being able to make sound product decisions without perfect information
- Working in Agile environments with distributed teams
- Managing and prioritizing product backlogs
- Communicating technology and roadmap strategies
- Knowledge of blockchain, cryptocurrencies or web3 is a huge plus
- Knowledge of Arweave or decentralized storage systems is a huge plus
